

* Timing? 2-6 weeks after birth

in first Newborn male

Association → exposed to macrolide eg. erythromycin
(stimulate peristalsis)

* Diagnosis?

Ultrasound ⇒ Target Sign

GI Contrast ⇒ String sign

Hypertrophic Pyloric Stenosis

Hypertrophy of pyloric circular smooth muscle

narrowed pyloric canal

gastric outlet obstruction

Impaired gastric emptying

Projectile Nonbilious vomiting
after feeding

Hungry
after
vomiting

"Hungry vomiter"

Dehydration

HCl⁻ loss

Alkalosis

↑ Na/K⁺
exchange
in kidney
(↓ Na/H⁺)

Hypokalemia

Hypochloremia

Hypochloremic
Hypokalemic
metabolic
Alkalosis

Grossly

Visible
peristaltic
waves
in upper
abdomen

Palpable
"olive shaped"
mass
in Epigastric
region
